|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sept. 2022 – Jan. 2026 | <b>Altair Engineering.</b> Software Development Engineer. Design and implementation of mesh and geometry algorithms and improvements for HyperMesh. <i>Role continued under Siemens Digital Industries Software following Altair's acquisition by Siemens in 2026.</i>                                    |
| Aug. 2022              | <b>University of Thessaly.</b> Postdoctoral researcher in the System Dynamics Laboratory. Optimal sensor placement for response reconstruction and monitoring of structures.                                                                                                                              |
| Nov. 2021 – Aug 2022   | <b>Hellenic Air Force.</b> Military Service at the 111th Combat Wing, Nea Aghialos Air Base. Provided network administration, system maintenance, and technical support in a mission-critical military environment.                                                                                       |
| Oct. 2021              | <b>University of Thessaly.</b> Postdoctoral researcher in the System Dynamics Laboratory. Monitoring and response reconstruction in bridges using on-board measurements from passing trains, and application of sparse Bayesian learning techniques for leakage detection in water distribution networks. |
| Aug. 2014 – Sept. 2014 | <b>ETH Zurich.</b> Internship in the Computational Science and Engineering                                                                                                                                                                                                                                |

Laboratory. Exploring Bayesian Inversion Methods for Parameter Estimation of Models of Objects Falling in a Medium.

### **Areas of Interest / Expertise**

Structural health monitoring; Digital twins; Model updating and parameter estimation; Bayesian learning; Mesh generation; Finite element modeling; Structural dynamics; Earthquake ground motion response; Earthquake data processing; Data analysis and visualization.

### **Teaching Experience**

|                       |                                                                                                                                                                                                                                                                        |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Feb. 2025 – Present   | <b>University of Thessaly</b> , Department of Mechanical Engineering. <b>Lecturer</b> . <i>Computational Dynamics of Engineering Systems (MY3301)</i> , part of the undergraduate studies program.                                                                     |
| Sept. 2024 – Present  | <b>University of Thessaly</b> , Department of Mechanical Engineering. <b>Lecturer</b> . <i>Ordinary Differential Equations (TE0103)</i> , part of the undergraduate studies program.                                                                                   |
| Mar. 2021 – July 2021 | <b>University of Western Macedonia</b> , Department of Mechanical Engineering. <b>Lecturer</b> . <i>Stress Analysis Methods: Theory, Simulation, Experiment (ADMES23)</i> , part of the graduate studies program in “Advanced Engineering of Energy Systems” (ADVENS). |
| Winter 2019           | <b>California Institute of Technology</b> , Department of Mechanical and Civil Engineering. Teaching Assistant (TA). <i>Mechanics of Structures and Solids (Ae/AM/CE/ME 102B)</i> . TA to Professor John Hall.                                                         |
| Winter 2018           | <b>California Institute of Technology</b> , Department of Mechanical and Civil Engineering. Teaching Assistant. <i>Experiments and Modeling in Mechanical Engineering (ME 050A)</i> . TA to instructor Dr. Michael Mello.                                              |

### **Technical Skills – Programming Languages**

- C++ (Daily development of mesh and geometry algorithms and interfaces for HyperMesh core)
- MATLAB (Multiple projects and daily use during my Ph.D., including the development of Structural Health Monitoring and earthquake signal processing applications and scripts)
- Fortran (Finite element software for beam and shell discretization and analysis)
- Python (Deep neural network project for image classification)
- Tcl (Scripting for OpenSees and test framework development for HyperMesh)
- Html/CSS/JavaScript (Hobby - Personal webpage)

### **Technical Skills – Finite Element Modeling**

- HyperWorks Suite: HyperMesh, HyperView, OptiStruct (Altair Engineering - Siemens DISW)
- ANSA - META (Beta CAE)
- Ansys Mechanical, Ansys CFD (ANSYS)
- SAP2000, ETABS (CSI)
- Abaqus FEA (Dassault Systèmes)
- OpenSees (UC Berkeley - Open source)

### **Technical Skills – Other**

- Geometric modeling (AFC - HyperMesh’s native geometric kernel)
- Computer-aided design (AutoCAD)
- Version control (Git, Perforce)
- Product management (Jira, Confluence)
- Agile workflows (Scrum, Kanban)
- Document authoring (Microsoft Office, LaTeX)
- AI-assisted development (GitHub Copilot)
- Generative AI & LLM productivity tools (Microsoft Copilot, Claude)

## **Ph.D. Research Work**

My Ph.D. research focused on the area of structural health monitoring (SHM). I developed a structural damage identification methodology and software that allows detection, localization, and quantification of damage in a structure following a potentially damaging event. The method is based on sparse Bayesian Learning and integrates information from nonlinear finite element (FEM) models with information contained in dense accelerometer measurements. The developed approach enables model updating and model parameter estimation, combining physics-based simulation with measurement data in order to assess structural integrity under potentially damaging events. (*Journal publication [2]*).

As a member of Caltech's Community Seismic Network (CSN – [csn.caltech.edu](http://csn.caltech.edu)), I contributed to the processing, analysis, and visualization of large-scale seismic datasets collected from dense sensor networks in the Los Angeles region. A key component of this project included a collaborative effort with the NASA Jet Propulsion Laboratory (JPL) for dense accelerometer sensor deployment. The CSN sensor deployment achieved unprecedented density on the JPL campus in Pasadena, with an average inter-station spacing of approximately 200 m, enabling high-resolution analysis of ground-motion variability and wave propagation effects. The collected data was used in order to investigate urban ground-motion response and structural system behavior, as well as for the evaluation of 3D finite difference simulations and ground motion prediction equations (*Journal Publications [3,4]*).

## **Selected Honours/Awards**

|            |                                                                                                                                                                                                |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2017-2020  | The Cecil and Sally Drinkward Graduate Fellowship, Department of Mechanical and Civil Engineering, California Institute of Technology.                                                         |
| 2016-2017  | The Allan Acosta Endowed Graduate Fellowship, Department of Mechanical and Civil Engineering, California Institute of Technology.                                                              |
| 2011-2016  | State Scholarships Foundation (IKY) Fellowship and award received for 5 years, for ranking 1 <sup>st</sup> during my studies in the Mechanical Engineering Department, University of Thessaly. |
| Sept. 2011 | State Scholarships Foundation (IKY) Fellowship and award for high ranking during the National - Panhellenic Examination for admission to Greek Universities.                                   |
| Sept. 2011 | Eurobank Fellowship – Award for ranking first in his Lyceum - Senior High School.                                                                                                              |
